**“Comfort,” “Protection,” Ease of Installation, Economy
in Operation and a Lifetime of Satisfaction!**

FEATURES

A Saving of 10 to 12 Hours Labor—Quickly Installed at Little Expense.

Arcola comes already assembled, there are no sections that need to be joined with nipples or cemented together, thus saving you time, labor, and the possibility of breaking a section while assembling.

All this hard labor is done at the factory, by experienced mechanics. The boiler is assembled and tested and inspected before it is shipped from the factory, thereby assuring you of getting a boiler that is in first class condition and all ready for installation, without fear of leaks or breaks.

Do not overlook the weights of these boilers, as listed in the above chart, which proves that “ARCOLA” is made of the heaviest castings.

Hotstream Kerosene Water Heaters WICK BURNER TYPE—20 KW

The Hotstream Kerosene Water Heater brings to suburban and country homes all the luxuries of a plentiful supply of hot water for domestic use. The Hotstream is undoubtedly the most efficient water heater ever devised for use with kerosene. It operates in the same manner as heaters burning city gas and will give satisfactory service in every sense.

The operation of the Hotstream Kerosene Water Heater is simple—it requires little care—is easily installed and is very economical to operate.

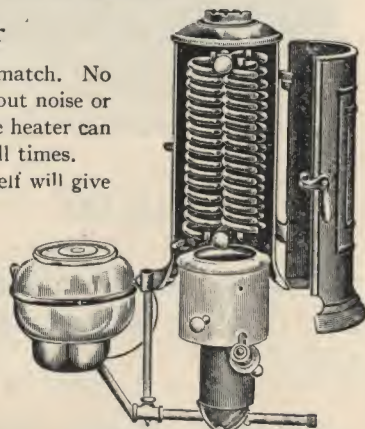

The “Trouble Free” Wick Burner

The burner is lighted instantly by simply applying a match. No generation is required. It burns a steady blue flame without noise or smoke, which can be regulated high or low as desired. The heater can be kept going constantly, insuring plenty of hot water at all times.

As only vapor off the burner is consumed, the wick itself will give lasting service with no more attention than an occasional wiping with a soft cloth.

This perfect combustion of the burner means a substantial saving of fuel. It consumes 90 gallons of air to one gallon of kerosene. In this mixture the 20KW burns 19½ hours on a full fire and 30 hours on a low fire.
